

ViewTrust Technology has developed an extremely robust on-shore and off-shore development model for internal and external facing software development projects. ViewTrust Technology development center in US and Pune, India offers skills and expertise on the most cutting edge technology for software development. ViewTrust team has proven track record for delivering software solutions and products in record time with rapid Return-On-Investment (ROI).

Why on-shore and off-shore Components?

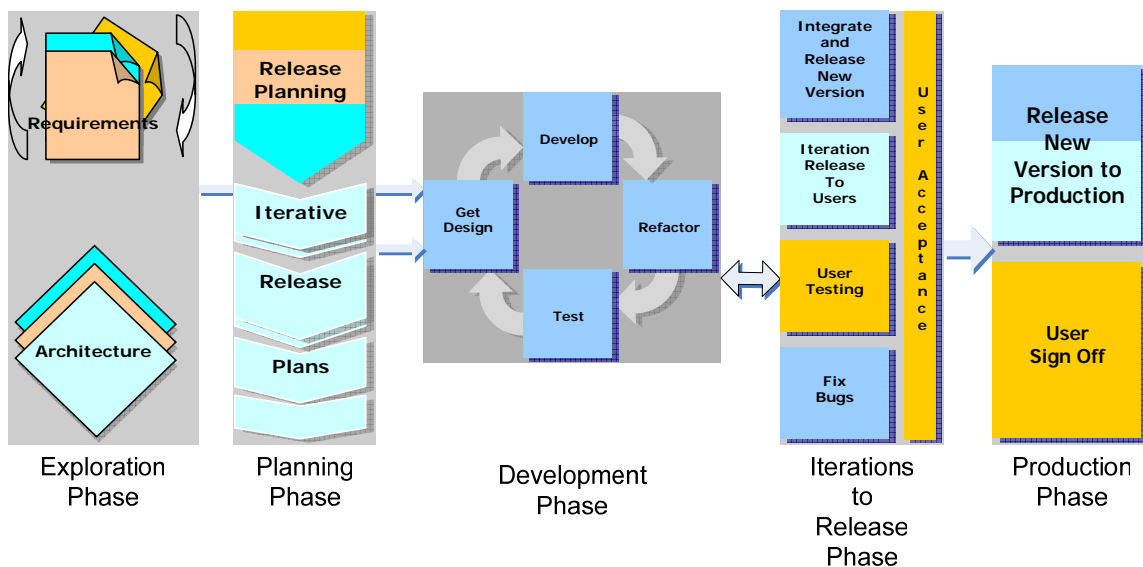

- The on-shore component in the US provides the close interaction with the customer to gather the requirements and develop and architecture for the solution desired.
- The functional and technical specifications are passed on to the team off-shore. The on-shore team in the US is responsible for solution delivery to the customers.
- The off-shore component allows top quality software development at low off-shore development rates, reducing your development cost.
- Increased development capacity without increasing the personnel cost, allowing you to respond to the fast changing and demanding market opportunities.
- Access to a large pool of resources with expertise in the latest software development technologies and practices.

ViewTrust offers delivery of custom software solutions that address the specific business needs for our customers. Our onsite and off-shore software development expertise provides significant competitive advantage for our customers.

ViewTrust on-site and off-shore development resources allow customers to expand their software development teams and technological expertise with up to 80% cost savings and exponential returns.

Development Process Methodology

ViewTrust follows a software development process methodology derived from Rational Unified Process (RUP), Agile Methodology and Extreme Programming (XP).

Application Development

ViewTrust's focus is to provide excellent business Solutions using state-of-the-art technology. We approach each project as a building block in a long-term business relationship with our clients. We provide high quality Technical Solutions that empower our clients. Some of the markets our professionals have addressed include:

- E-Commerce
- Insurance
- Investment Banking
- Networking and Telecommunications

Over the years, ViewTrust has managed to build a **solid team** of software outsourcing **professionals** that come from various backgrounds and expand the creative potential of the company. ViewTrust development team embrace a wide range of custom programming skills involving the latest and most effective development technologies such as Java, .NET, Database and Networking application development.

Application Re-Engineering

ViewTrust offers complete life cycle support from reengineering planning through implementation. Our reengineering services help organizations consolidate their existing software applications towards a single platform whenever possible, revitalize legacy applications, and redesign off-the-shelf Solutions to meet specific requirements. These services address:

- Database Migration
- Architecture Change
- Operating System Migration
- Functionality Change and Enhancement

Our Technical Capabilities in software development technology

Microsoft.Net (ASP.NET, VB.NET, C#.NET)

- Object Oriented Programming
- Separating Application into the Layers (UI, Presentation, Business Logic, Data Access)
- Web Forms (custom frameworks, custom controls, caching, using web services, XML/XSLT, Adv. Asp.net Controls Usage)
- Security (windows authorization, code access permissions, cryptography usage)
- Web Services (SOAP Manipulation, SOAP Authentication)
- Globalization (multi-language application support)
- Deployment (web deployment, auto-upgrades)
- Serialization (custom, selective, versioning support)
- Remoting (marshalling, channeling, security)
- Reflection (dynamic emitting of assemblies, custom attributes, auto generation of Web Service proxy)
- Reporting (Crystal Reports)

- Win Forms (custom controls, asynchronous data and message processing, custom designers, XP look-n-feel)
- Multithreading (synchronization, thread-safe UI, thread pooling, com, Com+)
- Windows Services
- Web Services

Java/J2EE

- Enterprise application using J2EE
- Web Services
- Frameworks (Struts, JSP, ANT)
- JavaMail, JDBC, Servlets
- Enterprise Networking and Network Security applications
-

Databases

- Microsoft SQL Server
- Oracle
- MySQL
