

ViewTrust ThreatVision Solution supports a comprehensive range of event and log sources. The ThreatVision solution can take data directly from the devices like IDS sensors or log consolidators like Cisco Works. Each data source uses 'ThreatVision Pre-processors' to process the data for analysis and correlation. The pre-processors receive data from variety of communication protocols such as syslog, OPSEC, RDEP, TLS, TL1. We continue to update the list below and work with our clients to support new data types every day.

Access and Identity Management

Cisco Secure Access Control Server (ACS)
Juniper SBR (Radius)
Microsoft Active Directory
Microsoft IAS (Windows RADIUS)

Anti-Virus / Anti-Spam

Symantec Antivirus Corporate Edition
Symantec Mail Security 8200 Series
Symantec Mail Security for MS

Applications

Application Logs
Microsoft IIS
Apache
Blue Coat SG appliances
Cisco CSA

Content Security

Websense

Database

Microsoft SQL
